

ABSTRACT OF THE DISCLOSURE

5 A green garbage treatment apparatus which comprises a
disposer, a flow rate adjustment tank for temporarily storing
a mixture of a green kitchen garbage ground by the disposer
and a kitchen waste water, a solid-liquid separation device
for separating the mixture into a solid component and a liquid
component, a composting device for composting the solid
component, a precipitation-separation device for allowing fine
particles in the liquid component to precipitate, a waste
water treatment device for subjecting the liquid component fed
from the precipitation-separation device via a dividing device
to a biological treatment to thereby obtain a treated water,
and an insect removal device for removing deleterious insects
such as a fly which are generated, for example, in the waste
water treatment device. The apparatus is advantageous, in
particular, in that it can remove insects such as a fly which
are generated in the waste water treatment device.
